SKILLS

- Backend (Strong): Python (Django, DRF, FastAPI), Node.js (Express, NestJS)
- Frontend (Familiar): ReactJS, TypeScript, HTML/CSS
- Database / Caching: MySQL, PostgreSQL, Redis
- DevOps / System: Docker, Nginx, Unicorn, Ubuntu
- Tools & Practices: Git, Scrum, Postman, JWT

SOFT SKILLS

- Self-learning
- Teamwork
- Time management
- Responsibility

EDUCATION

Vietnam-Korea University of Information and Communication Technology

- GPA: 8.2/10
- English (Listening & Reading)

PROFILE

Backend Developer specializing in Python (Django, FastAPI) with internship experience in developing scalable APIs and optimizing backend systems. Strong in performance optimization, async processing, and database design (PostgreSQL, Redis). Passionate about building reliable, high-performance backend services in real-world environments.

WORK EXPERIENCE

Intern Backend - Rikai Technology

29/09/2025 - 26/12/2025

- Developed routing modules for a nationwide route-finding system in Japan using Python, FastAPI, GeoPandas, and pgRouting.
- Optimized routing algorithms and database queries, reducing execution time from 33 seconds to 1.2 seconds.
- Migrated backend services from synchronous to asynchronous architecture within 3 days, improving system throughput and responsiveness.
- Redesigned PostgreSQL schemas, indexing strategies, and pgRouting query structures to reduce latency and production server load.

Fresher Backend Developer - SapotaCorp

09/03/2026 - 15/05/2026

- Maintained and developed features for the AttituX HR Platform using .NET technologies.
- Resolved bugs and improved system reliability across authentication, profile, and admin modules.
- Standardized application-wide light/dark theme behavior for a more consistent user experience.
- Built and enhanced internal admin management features aligned with business workflows and operational requirements.
- Collaborated within Agile/Scrum workflows through pull requests, code reviews, and issue tracking.

Personal Project - VietDon Donation Platform 16/02/2025 - 15/06/2025

- Developed VietDon, a real-time donation platform for streamers in Vietnam using Django, DRF, and React.
- Designed and implemented RESTful APIs, JWT authentication, donation workflows, and payment integration.
- Integrated Pay2s QR payment gateway and handled asynchronous payment-related processing.
- Improved system responsiveness using Redis caching and Celery background workers.
- Built real-time donation status updates with Django Channels and WebSocket communication.
- Configured scalable media delivery with Cloudflare R2 and custom domain integration.
- Managed containerized deployment infrastructure using Docker, Nginx, PostgreSQL, and Redis.

Personal Project - Clothing Shop API

16/02/2025 - 15/06/2025

Tech: Django, DRF, JWT, MySQL, Redis, Gunicorn, Nginx

- Developed RESTful APIs with JWT authentication for an e-commerce backend.
- Implemented security mechanisms including brute-force protection, anti-spam filtering, and request validation.
- Integrated Redis caching to reduce database load and improve API performance.
- Deployed the backend using Nginx + Gunicorn with production-ready configuration.

Personal Project - BookStore

06/10/2025 - 19/10/2025

Tech: Django, DRF, JWT, MySQL, Redis, React TypeScript

- Developed RESTful APIs with JWT authentication for book management system.
- Implemented Redis caching to optimize query performance and reduce database load.
- Structured modular backend architecture for scalable CRUD operations.
