SKILLS

- Backend (Strong): Python (Django, DRF, FastAPI), Node.js (Express, NestJS)
- Frontend (Familiar): ReactJS, TypeScript, HTML/CSS
- Database / Caching: MySQL, PostgreSQL, Redis
- DevOps / System: Docker, Nginx, Gunicorn, Ubuntu
- Tools & Practices: Git, Scrum, Postman, JWT

SOFT SKILLS

- Self-learning
- Teamwork
- Time management
- Responsibility

EDUCATION

Vietnam-Korea University of Information and Communication Technology

- GPA: 8.2/10
- English (Listening & Reading)

PROFILE

Backend Developer specializing in Python (Django, FastAPI) with internship experience in developing scalable APIs and optimizing backend systems. Strong in performance optimization, async processing, and database design (PostgreSQL, Redis). Passionate about building reliable, high-performance backend services in real-world environments.

WORK EXPERIENCE

Intern Backend - Rikai Technology

29/09/2025 - 26/12/2025

- Developed routing modules for a nationwide route-finding system (Japan map) using Python, FastAPI, and GeoPandas to handle large-scale geospatial datasets.
- Optimized routing algorithm performance, reducing execution time from 33s to 1.2s through algorithm refinement and database query optimization.
- Migrated the backend service from synchronous to asynchronous architecture within 3 days, significantly improving system throughput and responsiveness.
- Redesigned PostgreSQL schema, indexing strategies, and optimized pgRouting queries to reduce latency and server load in production environments.

Intern Networking - VNNIC Technology

01/06/2024 - 02/08/2024

- Gained practical knowledge of networking concepts, routing models, and security fundamentals in a real-world infrastructure environment.
- Utilized monitoring tools (Nagios, ELK Stack) to analyze system status, logs, and alerts for infrastructure monitoring and incident support.

Personal Project - Clothing Shop API

16/02/2025 - 15/06/2025

Tech: Django, DRF, JWT, MySQL, Redis, Gunicorn, Nginx

- Developed RESTful APIs with JWT authentication for an e-commerce backend.
- Implemented security mechanisms including brute-force protection, anti-spam filtering, and request validation.
- Integrated Redis caching to reduce database load and improve API performance.
- Deployed the backend using Nginx + Gunicorn with production-ready configuration.

Personal Project - BookStore

06/10/2025 - 19/10/2025

Tech: Django, DRF, JWT, MySQL, Redis, React TypeScript

- Developed RESTful APIs with JWT authentication for book management system.
- Implemented Redis caching to optimize query performance and reduce database load.
- Structured modular backend architecture for scalable CRUD operations.
